

Hi! Thank you for using my TD Tracker. I hope it makes your hosting experience smooth and easy.

If you have any questions or suggestions, please let me know.

Keith (Vermonter)

## Version history

- 1.2 – added ranking changes
- 2.0 – rebuilt with macro for compiling scores
- 2.1 – added **Options**; made minor fixes to compilation
- 2.2 – added **Summary**; changed color scheme; added Additional Info to results
- 2.3 – added **PM**; fixed minor errors from 2.2

## Acknowledgements

Special thanks to the JBoard members who have tested various iterations of this Tracker and provided valuable feedback:

jjwaymee  
mahatma  
BigDaddyMatty  
TheyCallMeMrKid  
nightreign

Caboom

...and the TD Czar himself, RandyG.

## Defining the correct answers

**Important: NEVER insert or delete columns in the Tracker. It will throw off the formulas and the macro.**

Flip over to **Answers**. This is where you'll put the correct answers; the Tracker will compare the players' responses with these correct answers, and tabulate them accordingly.

Each question has four columns. The first three are for you to provide.

| Question 1        |                        |                                                                |    |
|-------------------|------------------------|----------------------------------------------------------------|----|
| WRONG             |                        |                                                                | 18 |
| DROP              |                        |                                                                | 0  |
| SHEEP             |                        |                                                                | 13 |
| Correct responses | Answer header          | Additional info                                                | #  |

| 1                 | [u]ONE[/u] DIRECTION   | "What Makes You Beautiful", "Little Things", "Best Song Ever"  | 8  |

Correct responses: the Tracker will look for these responses in **Scoresheet**. Pick something easy for you to type, as you'll probably need to adjust a few players' answers to align with what you put here.

Answer header: this will appear as the header, in bold. You can add BBCode formatting for [u]underline[/u], [i>italics[/i>, etc.

Additional info: this will appear above the header, in another, lighter color. You can also add BBCode formatting.

#: the number of players who selected this answer; automatically calculated.

## Setting up the game options

**Options** is a new feature designed to cut down on manual work. "DROP" (take zero points on a question) and "SHEEP" (automatically take the highest score for that question) are popular options, and if you want to use funny or thematic names for those options, you can enter them in column B.

|    | A                                                                                          | B       | C                                                                       | D |
|----|--------------------------------------------------------------------------------------------|---------|-------------------------------------------------------------------------|---|
| 1  | basic gameplay scoring:                                                                    |         |                                                                         |   |
| 2  | using the DROP phrase                                                                      | DROP    | gives the player a score of                                             | 0 |
| 3  | using the SHEEP phrase                                                                     | SHEEP   | gives the player the highest-scoring amount                             |   |
| 4  | If more people pick "SHEEP" than the actual SHEEP total, should we use that higher amount? | NO      | either "YES" or "NO"                                                    |   |
| 5  |                                                                                            |         |                                                                         |   |
| 6  | wrong answer penalties:                                                                    |         |                                                                         |   |
| 7  | multiply the sheep score by:                                                               | 1       | (typically 1)                                                           |   |
| 8  | and add this many points:                                                                  | 5       | (type PLAYERS to give the number of players)                            |   |
| 9  |                                                                                            |         |                                                                         |   |
| 10 | formatting:                                                                                |         |                                                                         |   |
| 11 | Would you like the standings to indicate change in position (↑, ↓, unch)?                  | YES     | either "YES" or "NO"<br>note: doesn't affect question 1                 |   |
| 12 | "additional info" color:                                                                   | #BF0040 | visit <a href="http://hslpicker.com">hslpicker.com</a> to find hex code |   |

You can also customize the wrong answer penalty. The example above takes the SHEEP score and adds 5 points for any wrong answers.

If you want the wrong-answer penalty to be based on the number of players, use the shorthand PLAYERS. If you need help figuring this out, let me know.

Because I can't resist giving an example: if you wanted the wrong-answer penalty to be the SHEEP score plus 1/10 the number of players, rounded to the nearest whole number, you'd enter `"=ROUND(PLAYERS/10,0)"` in the second slot.

Formatting: if you want to show changes in position in the standings, keep "YES" in the green box. The last box determines the color for the "additional info" in **Answers**. #BF0040 is a nice shade of dark red, but feel free to pick your own.

## Entering players' responses

It's easiest to set up a Google Form to take in the responses, then copy them into **Mainframe** as they come in.

To do this, go to your Google Drive (if you don't have one, it's easy to set up) and create a new Form. Create a field for the player's name as well as for each response.

When players submit their responses, they will go into a Google Spreadsheet, which you can access from your Google Drive. You might have to realign the columns in the spreadsheet so that they align with the columns in the Tracker.

|    | A                        | B            | C          | D          | E          | F          | G          | H          |            |
|----|--------------------------|--------------|------------|------------|------------|------------|------------|------------|------------|
| 1  | Make PM for selected row | Handle       | Question 1 | Question 2 | Question 3 | Question 4 | Question 5 | Question 6 | Question 7 |
| 2  | 11/21/15 16:39           | MollyQMurphy | 3          | 121        | 16         | 1861       | 1          | 22         |            |

| 9  | 11/21/15 19:21           | caknuck      | 98         | 22         | 10         | 1815       | 5          | 451        |            |
| 10 | 11/21/15 21:35           | Dlinn83      | 5000       | 11         | 12         | 1762       | 2          | 22         |            |

When you copy the responses to the Tracker, they'll be reflected on **Scoresheet**. The numbers will update automatically.

Well, almost all of them, anyway. Do you see those red cells? They say "Help!" and they require your attention.

There are two reasons a cell will turn red. For one, maybe a player's response doesn't match exactly the list of answers you placed in **Answers**. Perhaps they used an alternate spelling or spelled out a number. If it's correct, manually enter the proper term in the appropriate "Response" cell.

If the response is incorrect, where "Help!" is shown, type XX. This will turn the cell black and apply the "WRONG" score for that question from **Answers**.

*Sorry, gamawire!*

In either case, the Totals will change from #### to an actual number.

You can use the "Adj" column to add or subtract points for things like bonus questions. It is blank by default.

If you want to get a sense of answers' popularity, flip back to **Answers**. You can also check to ensure your formulas are working properly.

## Confirming players' entries

If you'd like to send players a PM (personal message) with their entries, select a cell in their row in **Mainframe** and click "Make PM for selected row" at top left.

|    | A                        | B            | C          | D          | E          | F          | G          | H          | I          |

| 18 | Q12                                                                                                | 95         |       | Q12: 95                                                     |    |      |    |   |    |
| 19 |                                                                                                    |            |       |                                                             |    |      |    |   |    |

Here, since my quiz had only 12 questions, I deleted the rows for Q13 through Q20. This is one of the few times it's ok to delete rows.

You can also customize the values Q1, Q2, Q3, etc. to something more personal: "1. Music", "2. Games", "3. Film", and so on.

## The 10,000-foot view

You can get a bird's-eye view of the entire field by flipping to **Summary**. It will tell you how many answers have X responses in each question. The "Total" column makes it easy for you to see how many unanswered questions remain.

| 13 | 11        | 3     | 1  | 1  | 1  | 0  | 0  | 0  | 0  | 0  | 0  | 0   | 0   |

The "ACE" calculations are the total number of points given out for correct answers. It should give a general sense of whether responses are bunched in a few high-number responses (higher ACE) or spread out more evenly (lower ACE).

ACE is a term I borrowed from hurricane meteorology, short for *accumulated cyclone energy*. If you've got an idea for a backronym, I'm all ears.

## Updating the participant list on JBoard

I use the [list] function inside a [spoiler][spoiler] tag, to save space. If you put [list=1] in BBCode, it will give you a numbered list, with each item marked with [\*]. You can just copy and paste this over from the first two columns on **Scoresheet**.

Be sure to end it with `[/list]`.

## Revealing who responded what

Once the deadline is closed, it's time for the big reveal! Start by deleting any unused rows in **Scoresheet**.

Place the question number in the box at top left in **Scoresheet**, then click the button "Run results for Q:". A box will pop up to verify you're running the macro on the right question.

|   | A                  | B            | C      | D          | E    | F    | G     |    |
|---|--------------------|--------------|--------|------------|------|------|-------|----|
| 1 | Run results for Q: |              | 1      | Question 1 |      |      |       | Q  |
| 2 | ▼ Player           | ▼            | Ord ▼↑ | Response   | ▼ Re | ▼ Ac | ▼ Tot | Re |

To format it properly, do the following Find & Replace functions in order.

| Find | Replace |
|------|---------|
| ^p   | ^p^p    |
| ^t   | ^p      |
| //// | ^p      |

(In case you're unfamiliar, ^p represents paragraph, ^t represents tab.)

Note: as of version 2.3.2 the last find and replace is four slashes. This is to avoid replacing the slashes in URLs, should you use them in your Additional Info.

```
[b]Wrong answers – 18 points[/b]

```

Now the text is ready to be copied to JBoard. You'll need to add unused responses manually. Note that if you like putting incorrect answers at the bottom, you'll need to do that manually, as well. You should also eliminate all but the first "Wrong answers – XX points" header.

## Updating the standings

Once you've published the answers and respondents, you can copy the standings in column D of **Results** and paste them on JBoard. The macro automatically inserts a row after every fifth line to make the standings more readable.

| C      | D                                                                                                                                                                                      | E | F |
|--------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---|---|
|        | Here are the standings for the current question.<br>You can copy these directly to Jboard.<br>The standings are automatically separated after every five names for better readability. |   |   |

| harr   |                                                                                                                                                                                        |   |   |

Starting with question 2, the Tracker will give additional information on the standings, such as previous total and change in position.

```

1. Dlinn83 — 5 + 1 → 6 pts [↑7]
1. tjconn728 — 1 + 5 → 6 pts [unch]
3. quarerrican — 6 + 1 → 7 pts [↑15]
4. deano — 5 + 4 → 9 pts [↑4]
4. immaf — 5 + 4 → 9 pts [↑4]

6. Abraxas — 5 + 5 → 10 pts [↑2]
6. BigDaddyMatty — 2 + 8 → 10 pts [↓4]
6. goforthetie — 6 + 4 → 10 pts [↑12]
9. dinghammer — 9 + 2 → 11 pts [↑29]

```

If you want to disable this, change the appropriate box on **Options** to "NO".

## Appendix A: compiling results manually

*Assuming the macro works as designed, you shouldn't have to do any of this. Hooray! I'm not going to update this for new versions of the Tracker as the process should remain largely the same.*

The calculator now allows you to compile answers for easy copying to JBoard. For the given question:

| Question 3        |     |                      |     |    |     |        |
|-------------------|-----|----------------------|-----|----|-----|--------|
| Player            | Ord | Response             | Res | Ac | Tot | Respo  |

Put the question number in the green box, then filter the third gray column (*Filter*) so that only "Yes" shows up. Then select the filtered cells in the first two columns and copy them.

## Appendix B: compiling standings manually

*You shouldn't have to do any of this, either. Double hooray!*

Note: If for some reason you do have to sort results manually, be sure to change the "change in position" choice to "NO" on **Options**. It won't work properly.

To the right of the gray cells is the *Automated standings* column, in light green.

After you remove the filter for your reveal, sort by *Total* of your question, and copy the text in green to JBoard.
